FOREWORD	7
PROLOGUE	11
ACKNOWLEDGEMENTS	18
CONTENTS	21
<b>Chapter 1</b>	<b>37</b>
The “stuff” of the universe: matter, particles, fields, waves, and “what-have-you”	
<b>1.1 Forces and particles (classical)</b>	<b>37</b>
1.1.1 <i>Interactions and reference frames</i>	
1.1.2 <i>Products between vectors</i>	
1.1.3 <i>Matrix operations and tensors</i>	
1.1.4 <i>Eigenvalues of an operator</i>	
1.1.5 <i>Velocity of a body</i>	
1.1.6 <i>Continuity of space</i>	
1.1.7 <i>Galilean relativity</i>	
1.1.8 <i>Newton’s three laws of motion</i>	
(a) <i>First law</i>	
(b) <i>Second law</i>	

	(c) <i>Third law</i>	
	1.1.9 <i>Work and kinetic energy</i>	
	1.1.10 <i>Newton's law of gravitation</i>	
	1.1.11 <i>Potential energy</i>	
	1.1.12 <i>Reduced mass</i>	
	1.1.13 <i>Orbital motion</i>	
	1.1.14 <i>Angular momentum</i>	
	1.1.15 <i>Collisions</i>	
	1.1.16 <i>Clockwork universe</i>	
<b>1.2</b>	<b>Fields</b>	<b>58</b>
	1.2.1 <i>Concept of a field</i>	
	1.2.2 <i>Conservative fields</i>	
	1.2.3 <i>Field lines and flux</i>	
	1.2.4 <i>The divergence of a vector-field</i>	
	1.2.5 <i>The circulation of a vector field</i>	
	1.2.6 <i>Circulating versus conservative field</i>	
	1.2.7 <i>The continuity equation</i>	
<b>1.3</b>	<b>Waves</b>	<b>65</b>
	1.3.1 <i>Wave equation and wave functions</i>	
	1.3.2 <i>Superposition of waves</i>	
	1.3.3 <i>Fourier analysis</i>	
	1.3.4 <i>Other function-spaces</i>	
	1.3.5 <i>Confined waves</i>	
<b>1.4</b>	<b>Light: Particles or waves?</b>	<b>73</b>
	1.4.1 <i>Newton versus Huygens</i>	
	1.4.2 <i>Diffraction of light</i>	
	1.4.3 <i>Composition of light</i>	
	1.4.4 <i>Spectrometers and light spectra</i>	
	1.4.5 <i>More examples of the diffraction of light</i>	
	1.4.5 <i>X-ray diffraction</i>	
<b>1.5</b>	<b>Electric and magnetic fields</b>	<b>78</b>
	1.5.1 <i>Characteristics of a static electric field</i>	
	1.5.2 <i>Static electric field within materials</i>	
	1.5.3 <i>Equilibrium of a free charge in an electrostatic field</i>	
	1.5.4 <i>Characteristics of a static magnetic field</i>	
	1.5.5 <i>Static magnetic field inside materials</i>	
	1.5.6 <i>Non-static magnetic fields: Faraday's law of induction</i>	
	1.5.7 <i>Non-static electric fields: Maxwell's displacement current</i>	
<b>1.6</b>	<b>Charged particles</b>	<b>87</b>
	1.6.1 <i>Cathode rays, channel rays, the Edison effect, and radio-active decay</i>	
	1.6.2 <i>Magnetic Lorentz force</i>	
	1.6.3 <i>Dynamic momentum of a charged particle in a magnetic field</i>	
	1.6.5 <i>Magnetic force on a current-carrying wire</i>	
	1.6.6 <i>Magnetic moment of an orbiting charged particle</i>	
	1.6.7 <i>The vacuum diode</i>	
	1.6.8 <i>Vacuum electronics</i>	

<b>1.7</b>	<b>Electromagnetic waves</b>	<b>95</b>
	1.7.1 <i>Time-dependent charge and current densities</i>	
	1.7.2 <i>Energy of electro-magnetic fields and waves</i>	
	1.7.3 <i>Light and the electromagnetic spectrum</i>	
	1.7.4 <i>Diffraction of vector waves</i>	
<b>1.8</b>	<b>Einstein's Theory of Relativity</b>	<b>99</b>
	1.8.1 <i>The speed of light</i>	
	1.8.2 <i>Einstein's postulates</i>	
	1.8.3 <i>The Lorentz transformation</i>	
	1.8.4 <i>Momentum and kinetic energy at high speeds</i>	
	1.8.5 <i>Physics in four-dimensional tensor format</i>	
	1.8.6 <i>Space-time diagrams</i>	
	1.8.7 <i>Does Einstein's theory imply that everything is relative?</i>	
	1.8.8 <i>Einstein's General Theory of Relativity</i>	
	1.8.9 <i>Cosmology</i>	
<b>1.9</b>	<b>The enigmatic electron</b>	<b>111</b>
	1.9.1 <i>Electrostatic field-energy of a single, stationary electron</i>	
	1.9.2 <i>Electromagnetic momentum and mass of an electron</i>	
	1.9.3 <i>"Heavy" electrons</i>	
<b>1.10</b>	<b>Turning on the heat!</b>	<b>113</b>
	1.10.1 <i>What "stuff" is heat?</i>	
	1.10.2 <i>Internal energy, heat and work</i>	
	1.10.3 <i>Reversible work: isothermal expansion</i>	
	1.10.4 <i>Reversible heat flow: calculating entropy</i>	
	1.10.5 <i>Changing work into heat and vice versa</i>	
	1.10.6 <i>Thermodynamics and Statistics</i>	
	1.10.7 <i>Statistical distribution functions</i>	
	1.10.8 <i>Maxwell's distribution</i>	
	1.10.9 <i>Boltzmann's thermodynamic probability function</i>	
	1.10.10 <i>Thermodynamic probability and entropy</i>	
	1.10.11 <i>Boltzmann's equilibrium distribution</i>	
	1.10.12 <i>Fluctuations and heat transfer</i>	
	1.10.13 <i>Disappointment and depression</i>	
	1.10.14 <i>Brownian motion and Einstein</i>	
<b>1.11</b>	<b>The ultra-violet catastrophe</b>	<b>125</b>
	1.11.1 <i>Spectra from light emitting bodies</i>	
	1.11.2 <i>Blackbody radiation</i>	
	1.11.3 <i>The modes of vibration</i>	
	1.11.4 <i>The Rayleigh-Jeans formula</i>	
	1.11.5 <i>Planck enters</i>	
	1.11.6 <i>Radiation from the walls</i>	
<b>1.12</b>	<b>Light corpuscles strike back and electrons "shudder"</b>	<b>132</b>
	1.12.1 <i>Einstein again</i>	
	1.12.2 <i>Playing billiards with photons and electrons</i>	
	1.12.3 <i>Particles with mass can also "wave"</i>	
	1.12.4 <i>Stirring waves into a gas</i>	

	1.12.5	<i>Nature is two-faced</i>	
<b>1.13</b>		<b>The centre of the atom</b>	<b>136</b>
	1.13.1	<i>To be or not to be</i>	
	1.13.2	<i>Plum-puddings have kernels</i>	
	1.13.3	<i>Probing and modifying matter with ions</i>	
<b>1.14</b>		<b>Let there be stable electron orbits!</b>	<b>138</b>
	1.14.1	<i>Quantising the electron-orbit around the nucleus</i>	
	1.14.2	<i>De Broglie's hypothesis and orbit stability</i>	
<b>1.15</b>		<b>Quantum mechanics of a single particle</b>	<b>141</b>
	1.15.1	<i>The nettle is grabbed</i>	
	1.15.2	<i>Schrödinger's wave equation</i>	
	1.15.3	<i>A "freely roaming" electron</i>	
	1.15.4	<i>Quantum-mechanical operators</i>	
	1.15.5	<i>What is really waving?</i>	
	1.15.6	<i>Max Born throws dice</i>	
	1.15.7	<i>Superposed waves in free space</i>	
	1.15.8	<i>Consecutive measurements</i>	
	1.15.9	<i>Operators and wave functions</i>	
	1.15.10	<i>Heisenberg becomes uncertain</i>	
	1.15.11	<i>Stationary energy states</i>	
	1.15.12	<i>Energy of an electron in an adiabatic box</i>	
	1.15.13	<i>Energy of an electron in an isothermal box</i>	
	1.15.14	<i>Bound electrons</i>	
	1.15.15	<i>Energy-time uncertainty</i>	
	1.15.16	<i>Tunnelling</i>	
	1.15.17	<i>Spin of an electron</i>	
	1.15.18	<i>Correspondence principle</i>	
	1.15.19	<i>Diffraction of a particle</i>	
<b>1.16</b>		<b>Quantum mechanics of many particles</b>	<b>171</b>
	1.16.1	<i>Configuration space</i>	
	1.16.2	<i>Wave function for identical particles</i>	
	1.16.3	<i>Exchanging identical particles</i>	
	1.16.4	<i>Pauli's exclusion principle</i>	
	1.16.5	<i>The periodic table of the elements</i>	
	1.16.6	<i>Bose-Einstein statistics</i>	
	1.16.7	<i>Fermi-Dirac statistics</i>	
<b>1.17</b>		<b>Exchange force interactions</b>	<b>180</b>
	1.17.1	<i>Two electrons in a conservative force-field</i>	
	1.17.2	<i>The "unperturbed" solution</i>	
	1.17.3	<i>Bi-electron spin wave functions</i>	
	1.17.4	<i>The exchange force</i>	
	1.17.5	<i>The Helium atom</i>	
	1.17.6	<i>The covalent bond</i>	
<b>1.18</b>		<b>Chemical bonding</b>	<b>186</b>
	1.18.1	<i>Interactions and bonding between atoms</i>	
	1.18.2	<i>The amazing carbon atom</i>	

<b>1.19</b>	<b>Quantum reality</b>	<b>191</b>
	1.19.1 <i>Copenhagen interpretation</i>	
	1.19.2 <i>Einstein becomes entangled</i>	
	1.19.3 <i>Schrödinger's cat</i>	
<b>1.20</b>	<b>Quantum relativity</b>	<b>194</b>
	1.20.1 <i>Schrödinger equation and special relativity</i>	
	1.20.2 <i>Klein-Gordon equation</i>	
	1.20.3 <i>Dirac equation</i>	
	1.20.4 <i>Dirac's equation for a charged particle in an electromagnetic field</i>	
	1.20.5 <i>Quantum electrodynamics</i>	
<b>1.21</b>	<b>Forces and particles (present time)</b>	<b>201</b>
	1.21.1 <i>Forces of nature</i>	
	1.21.2 <i>Yukawa and mesons</i>	
	1.21.3 <i>Quantum field theory</i>	
	1.21.4 <i>Theory of everything</i>	
	<b>References</b>	<b>203</b>
	<b>Chapter 2</b>	<b>205</b>
	<b>Solid materials: metals, insulators, semiconductors and superconductors</b>	
<b>2.1</b>	<b>Constituents of a solid material</b>	<b>205</b>
	2.1.1 <i>"Ionic-atoms" and valence electrons</i>	
	2.1.2 <i>Perfect crystalline structures</i>	
	2.1.3 <i>The adiabatic approximation</i>	
<b>2.2</b>	<b>Atomic vibrations and phonons</b>	<b>208</b>
	2.2.1 <i>Modelling atomic vibrations</i>	
	2.2.2 <i>Debye's generalised description of the vibrational energy</i>	
	2.2.3 <i>Phonons</i>	
	2.2.4 <i>Localised phonons</i>	
<b>2.3</b>	<b>Energy states of valence electrons</b>	<b>212</b>
	2.3.1 <i>Approaching the problem</i>	
	2.3.2 <i>An ideal metal</i>	
	2.3.3 <i>Behaviour of electrons in an ideal metal</i>	
	2.3.4 <i>Periodic boundary conditions</i>	
	2.3.5 <i>Charge carriers and the Fermi-surface</i>	
	2.3.6 <i>Bloch functions</i>	
	2.3.7 <i>A perfect insulator</i>	
	2.3.8 <i>Behaviour of electrons in a perfect insulator</i>	
	2.3.9 <i>Onset of delocalisation</i>	
<b>2.4</b>	<b>Extrinsic semiconductors</b>	<b>239</b>
	2.4.1 <i>Doping</i>	
	2.4.2 <i>Position of Fermi level</i>	
	2.4.3 <i>Process rates: activation energies</i>	
	2.4.4 <i>Wide bandgap semiconductors</i>	

2.4.5	<i>Intra-band conduction</i>	
2.4.6	<i>Impurity band formation</i>	
<b>2.5</b>	<b>Interfaces</b>	<b>248</b>
2.5.1	<i>The importance of interfaces</i>	
2.5.2	<i>Two dissimilar metals</i>	
2.5.3	<i>The p-n-junction</i>	
2.5.4	<i>Schottky metal junction to n-type material</i>	
2.5.5	<i>Ohmic contacts</i>	
2.5.6	<i>Fermi-level pinning</i>

4.3.2	<i>Sub-surface wave-tails</i>	
4.3.3	<i>Vibration of the donor-related charge</i>	
4.3.4	<i>Deriving the depth <math>s</math> of a donor charge</i>	
4.3.5	<i>Bound states, DEC and substrate temperature</i>	
4.3.6	<i>Comparison to an atom</i>	
4.3.7	<i>Migration of an orbital on the surface</i>	
<b>4.4</b>	<b>Conclusions</b>	<b>348</b>

<b>Chapter 5</b>	<b>349</b>
<b>External "pair-orbital" formation</b>	
<b>5.1 Emission of two electrons from a single donor</b>	<b>349</b>
5.1.1 Donor emission coefficient	
5.1.2 Potential energy of the electrons	
5.1.3 Perpendicular solutions	
(a) When $z \geq 0$ :	
(b) When $z \leq 0$ :	
(c) Distances between the double-donor charge and unperturbed electrons:	
5.1.4 The lateral solutions	
5.1.5 The complete unperturbed single-electron wave functions	
5.1.6 The unperturbed bi-electron wave functions	
5.1.7 Adding the perturbation	
<b>5.2 Overlapping waves and the Coulomb force</b>	<b>363</b>
5.2.1 Coulomb interaction between the electrons	
5.2.2 Interaction in the lateral direction	
5.2.3 Interaction in the perpendicular direction	
<b>5.3 Electrons with parallel spins</b>	<b>368</b>
5.3.1 Potential energies of the two electrons	
5.3.2 Bi-electron wave function	
5.3.3 Excited energy levels	
5.3.4 Excited state with quantum numbers $n(0)$ , $n(0)+1$ and $h=0$	
5.3.5 Estimating the magnitude of the overlap parameter $\beta$	
<b>5.4 Electrons with opposite spins</b>	<b>375</b>
5.4.1 "Movement" of the electrons to a joint, average position	
5.4.2 Excited bi-electron-orbital, with quantum numbers $n(0)$ , $n(0)+1$ and $h=0$	
5.4.3 "Screening" of the positive charge	
<b>5.5 Discussion</b>	<b>377</b>
5.5.1 Comparison to single-electron orbital formation	
5.5.2 Comparison of the nearest excited states to the ground state	
5.5.3 Bound states, DEC and substrate temperature	
5.5.4 Two singly ionised donors at the same lateral position	
5.5.5 Single-electron orbital above a dipole terminated surface	
5.5.6 Migration of a bi-electron orbital on its seminal surface	
5.5.7 A dipotom with more than two electrons	
<b>5.6 Conclusion</b>	<b>386</b>
<b>Chapter 6</b>	<b>387</b>
<b>Donor emitter with more than two ionisation levels</b>	
<b>6.1 Emission of <math>M &gt; 2</math> electrons from a single donor</b>	<b>387</b>

6.1.1	<i>Potential energy of the emitted electrons</i>	
6.1.2	<i>Unperturbed solutions of the Schrödinger equation</i>	
<b>6.2.</b>	<b>Ground state electron occupation of energy levels</b>	<b>390</b>
6.2.1	<i>Pauli exclusion-principle and unperturbed electron energies</i>	
6.2.2	<i>Interaction between electrons with different quantum numbers <math>n(0)</math> and <math>n(0)+1</math></i>	
6.2.3	<i>The ground state energies of the external electron orbitals</i>	
6.2.4	<i>The perpendicular and lateral geometric parameters</i>	
<b>6.3</b>	<b>Discussion and conclusion</b>	<b>398</b>

(c) <i>Contribution of the surrounding orbitals</i>	
8.2.3 <i>Solving the Schrödinger equation for one of the electrons</i>	
(a) <i>The perpendicular solution</i>	
(b) <i>The lateral solution</i>	
8.2.4 <i>Geometric considerations and restrictions</i>	
(a) <i>Depth of the positive charges</i>	
(b) <i>Lateral dimensions of the orbitals</i>	
8.2.5 <i>Calculated results</i>	
8.2.6 <i>Alternative arrangements of separate orbitals on a single surface</i>	
<b>8.3 A periodic array of identical hydro-dipomols</b>	<b>435</b>
8.3.1 <i>Symmetry and electron-electron interaction</i>	
8.3.2 <i>Unperturbed single-electron potential energies</i>	
(a) <i>Contribution of the sub-surface positive charges</i>	
(b) <i>Contribution by the surrounding orbitals</i>	
(c) <i>Unperturbed, effective charge along the perpendicular direction</i>	
8.3.3 <i>Perturbed single-electron potential energies</i>	
(a) <i>Effective charge along the perpendicular direction</i>	
(b) <i>Effective charge along the lateral direction</i>	
8.3.4 <i>Geometric considerations and restrictions</i>	
8.3.5 <i>Calculated results</i>	
<b>8.4 Overlapping of adjacent pair-orbitals</b>	<b>444</b>
8.4.1 <i>Pauli exclusion-principle and Heisenberg Uncertainty Relationship</i>	
8.4.2 <i><math>\beta</math>-parameter: Overlapping of single-boson Gaussian-shaped orbitals</i>	
8.4.3 <i>Mott vindicated!</i>	
8.4.4 <i>“Multi-particle” waves</i>	
<b>8.5 The effect of substrate temperature</b>	<b>451</b>
8.5.1 <i>The donor emission coefficient and temperature</i>	
8.5.2 <i>External electron orbitals on a single surface</i>	
8.5.3 <i>External electron orbitals between two surfaces</i>	
<b>8.6. General discussion</b>	<b>455</b>

<b>Chapter 9</b>	<b>457</b>
<b>Charge transport and superconduction</b>	
<b>9.1 Sub-surface hole-conduction</b>	<b>457</b>
9.1.1 <i>Lateral polarisation of a solitary orbital on an insulating surface</i>	
9.1.2 <i>Migration of a solitary orbital when applying an electric field</i>	
9.1.3 <i>Migration of a collection of orbitals when applying an electric field</i>	
9.1.4 <i>Surface conduction of hydrogenated diamond revisited</i>	
<b>9.2 Dielectric breakdown of an orbital-array</b>	<b>465</b>
9.2.1 <i>Applying a lateral electric field</i>	
9.2.2 <i>Lateral polarisation</i>	
9.2.3 <i>An array of polarised orbitals on a single surface</i>	
(a) <i>Potential energy and ground-state energy of an electron</i>	
(b) <i>Polarisation distance as a function of the applied field</i>	
(c) <i>Polarisation and distance ratios:</i>	
(d) <i>Reduced electric field</i>	
(e) <i>Breakdown field</i>	
9.2.4 <i>An array of hydro-dipomols</i>	
(a) <i>Potential energy and ground-state energy of an electron</i>	
(b) <i>Polarisation and distance ratios</i>	
(c) <i>Calculating the breakdown field</i>	
<b>9.3 Superconducting orbital arrays</b>	<b>479</b>
9.3.1 <i>Injecting electrons into an orbital array</i>	
9.3.2 <i>Velocity of the charge-carriers</i>	
9.3.3 <i>Uncertainty and binding energy</i>	
9.3.4 <i>The maximum transfer speed</i>	
9.3.5 <i>Maximum current density</i>	
9.3.6 <i>Orbital-density and the onset of superconduction</i>	
9.3.7 <i>Critical temperature</i>	
9.3.8 <i>Contacts to a superconducting layer of orbitals</i>	
9.3.9 <i>Current flow by induction</i>	
9.3.10 <i>Meissner-Ochsenfeld effect</i>	
9.3.11 <i>Magnetic and electric strengths of a superconducting layer</i>	
9.3.12 <i>Phase relationship between localised superconducting orbitals</i>	
<b>9.4 Superconducting macro-waves</b>	<b>490</b>
9.4.1 <i>Faster than light!</i>	
9.4.2 <i>DNA and non-local signal transfer</i>	
9.4.3 <i>Macro-waves and Bose-Einstein condensates</i>	
<b>9.5 Experimental data revisited</b>	<b>495</b>
9.5.1 <i>Superconduction in the copper-oxide ceramics</i>	
9.5.2 <i>Diamond-anode superconduction</i>
